The All Seasons Mailbox Stand™

an adjustable height and depth mailbox stand for use in high snowfall geographies

Features:

- A mailbox stand that provides adjustable height and depth flexibility after the snowfall
- Helps home owner or business avoid missed mail delivery due to snow covered mailbox
- Locking feature allows owner to lock stand into desired position
- May be designed and manufactured with no major cost increase to current systems

All Seasons Mailbox Stand™

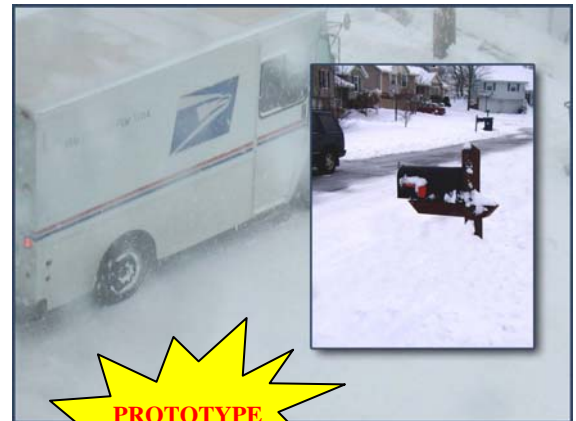

The All Seasons Mailbox Stand™

is a patent pending adjustable mailbox system for use in high snowfall geographies. It is very common, when living in a high snowfall area, to have the mailbox become completely covered with snow either by the snowfall itself or by the result of the snow plow causing snow banks on the sides of the street. In such situations, the mailboxes in these locations become covered and thus are un-accessible for extended periods of time to both the mail carriers and also the home owners.

The All Seasons Mailbox Stand is a solution that allows the homeowner to adjust both the height and the depth of the mailbox respective to the street/sidewalk. After the street has been plowed and standard mailboxes become covered, the patent pending adjustable system allows the user to unlock the stand and adjust upward (vertically) and outward (horizontally) thus allowing the mailbox to become accessible to the mail carrier.

It is projected that millions of homes/businesses throughout the United States and foreign countries could greatly benefit by having an adjustable mailbox stand.
